

Checkout what they have to say...

"A customer brought his delivery van, which has substantially lost power, to my workshop. The van has clocked over 200,000 kms. Diagnosis a week earlier at another workshop had pointed to the MAF Sensor as cause of power. Replacement of MAF Sensor however did not solve the problem.

A can of JLM's DPF Cleaner 100 ml, was then administered into the diesel fuel tank. After that the van was given a good run on the highway for 50 to 60 kms. It is magical to witness the van's power fully restored, and the warning light on the instrument cluster fade away, at the end of the run.

"There is nothing in the market that works better"

The DPF Cleaner is very effective, and solved the problem right away. Customer was very pleased, and relieved.

I fully endorse JLM's DPF Cleaner. There is nothing in the market that works better"
